

ISRO TECHNICAL TRAINING PROGRAMME

The National Skill Training Institutes (NSTIs) under the Ministry of Skill Development and Entrepreneurship (MSDE) have launched the ISRO Technical Training Programme in Bangalore, Mumbai, and Trivandrum. The initiative is in line with Prime Minister Shri Narendra Modi's Karmayogi Mission and aims to upgrade the skills of government personnel and contribute to increasing India's share in the global space industry. The MSDE and the Indian Space Research Organization (ISRO) have signed a Memorandum of Understanding (MoU) to upskill technical employees at the Department of Space (ISRO) and establish a formal framework for short-term courses to provide training to ISRO technical employees according to the latest trends and requirements in the country's space industry.

The NSTI-Mumbai will be conducting six training programs in various technical fields for the Indian Space Research Organization (ISRO) during the academic year 2022-23. The first training program, "Operation & Maintenance of Pumps and Valves," was held on November 24, 2022. Each program is 5 days long.
